

EntraGuard

The code can be right.
The situation can be wrong.

Voice-aware identity verification
for Microsoft Entra ID.

VERIFY THE PERSON. ASSESS THE PRESSURE.

A VALID CREDENTIAL

NUMBER MATCH

47

AN UNSAFE CONVERSATION

*“Just enter the number.
I’ll stay on the line.”*

Correct code ≠ trusted intent

A valid sign-in can hide an unsafe conversation.

Social engineering can turn legitimate authentication into an attacker's advantage.

01

Impersonation

“I’m from your IT team.”

Authority becomes pressure.

02

MFA coaching

“Just approve the prompt.”

The user follows instructions.

03

Payment pressure

“Change the beneficiary.”

An unsafe approval looks legitimate.

Credentials are validated. The conversation still needs scrutiny.

One call. More context. A governed decision.

Correct digits are necessary. Detected coercion can still stop the attempt.

Fits the Microsoft stack. Extends the decision.

TWO INTEGRATION ROUTES

Entra-first identity. Azure-native services. Evidence in Sentinel.

EAM is opt-in; tenant consent, policy and calling prerequisites apply. Graph actions depend on licensing and permissions.

See why access was granted. Or why it was refused.

01

AI advises. Policy decides.

A model assessment does not directly grant access or contain users.

02

Bind trust to the action.

Fresh verification binds to exact demo-payment details.

03

Keep an evidence trail.

Durable receipts, policy versions and owner-scoped history.

Protect the approval. Not just the credential.

BUILT

- **Voice-aware verification**

Calls, context and coercion analysis.

- **Durable trust + policy**

Sessions, receipts and bound demo approvals.

- **Two integration routes**

Application API + opt-in Entra EAM.

MVP · Demo ledger only · Voice scoring observes by default · No voice-clone / PAD claim

**Looking for an identity / SOC partner
and a test tenant.**

NEXT: A CONTROLLED TENANT PILOT

- Completion rate
- False refusals
- Time to intervention

Measure on real calling channels.
